

I (supervising dentist's name) _____

have agreed to supervise

(dental hygienist's name) _____

during the completion of a Local Anaesthetic Logbook which is the clinical section of the Module in Administration of Block and Infiltration Local Anaesthesia.

The aim of the practical exercises is that the dental hygienist becomes competent in the administration of block and/or infiltration anaesthesia for adults and children in a safe, effective and painless manner. The dental hygienist and I will complete the comments section of the logbook to aid the learning process.

10 separate Infiltration (if not already completed) and 10 Block Anaesthetic Injections are required to complete the logbook.

Only "*LA achieved*" will be counted in the logbook. "*LA not achieved*" will be noted if the LA was ineffective or was completed by the dentist, these attempts do not count in the logbook but are important to record.

I understand that:

The patients' medical history will have been reviewed

I will prescribe the local anaesthetic agent.

I am required to directly supervise the administration of the local anaesthetic.

I must remain on the premises until the patient has been dismissed.

The logbook must be completed within six months.
